

Sanlorenzo at Fort Lauderdale International Boat Show 2023

Press Release, 20 October 2023 - Sanlorenzo confirms its participation at the **Fort Lauderdale International Boat Show** from 26 to 30 October 2023, and announces the presence, for the first time in the United States, of a Superyacht from the **Alloy series**. With aluminium hull and superstructure, this 44 meters project has been developed by Sanlorenzo together with Zuccon International Project studio for the design of the external lines and the development of a new layout concept, aimed at living at sea in a modern way.

Alloy

A range that saw its first unit in the water in 2020 and today sees the 12th hull under construction. Thanks to a revolutionary use of space, **Alloy** features the owner's cabin, conceived as a true private apartment arranged on three levels. The design was realised to maximise liveability on board; located at the bow of the main deck, in the full-beam part of the hull, the owner's cabin consists of three areas: a sleeping area, a lounge on the mezzanine level and a versatile area on the upper deck, which can be used as a study, GYM, relaxation area and a large private outdoor area, complete with sundeck, Jacuzzi and lounge area.

More intimate spaces combine with areas devoted to conviviality: Alloy is divided between spaces for the exclusive use of the owner and areas dedicated to guests, four double cabins on the lower deck, the sun deck, and the large beach area. The latter features an outdoor platform at the water's edge, thanks to the folding sides and transom, allowing a full connection with the sea. The shipyard eagerly anticipates the opportunity to present the Alloy line to the US public and industry enthusiasts.

Alloy will be flanked by some of the yachts in the company's SX, SD and SL ranges:

- **SX88**: a combination of the classic motoryacht with flying bridge and an explorer typology, the SX88 is an innovative proposal with intelligent, rational and practical solutions. Striking a perfect balance between functionality and aesthetics, the SX88 features large open spaces and ample glass surfaces to ensure effective indoor/outdoor communication.
- **SD90**: the third chapter in a success story, is a project that focuses on transversal technological efficiency, both in terms of resistance to motion by the hull and research into materials. A model whose approach is closely linked to transformability: the flexibility of the SD90's interiors allows the boat to adapt to the different needs of those who inhabit it, evolving and transforming itself through innovative interior design solutions and configurations.
- **SL86**: elegant and well-proportioned lines characterise the model, an icon of the planing range, which at its debut introduced several on-board innovations destined to become nautical classics, such as the bulwark which is cut to allow light to enter through the large windows and the bow living area furnished with sofas, a table, sundeck and cabriolet for shade. A yacht capable of combining tradition and innovation and offering an unparalleled level of customisation in its category.

- **SL120A / SL96A / SL90A:** a range of yachts that take the concept of asymmetry to its maximum expression. The concept of the asymmetrical line testifies to the shipyard's particular aptitude for working on the concept of space, shaping it to its liking to ensure maximum liveability on board. The concept of asymmetry is thus declined in different ways, giving rise to an unprecedented layout that allows for greater functionality of interior spaces and enhanced dialogue with the outdoors.

The Sanlorenzo vessels will be joined by two models from the Bluegame brand: **BG42** and **BG74**. In just 13 metres, BG42 guarantees incredible performance in terms of fuel consumption, autonomy and features as well as unexpected sailing comfort for a 40'. It features a large cockpit, a walk-around protected by high edges for safe operations in open sea and ample visibility during manoeuvres, thanks to the central command post and aft glass. BG74 is the perfect expression of Bluegame cross-over soul, that escapes from belonging to a single segment, resulting as successful fusion of open and flybridge. A high-performance hull whose objective is to increase both comfort as well as marine features in order to relaunch the concept of living and inhabiting a boat in a modern manner and to increase the connection with the surrounding environment.
